## PROFESSIONAL SUMMARY

B.Tech Data Science graduate (2026) with hands-on experience in ML model development, data engineering pipelines, and business intelligence dashboards. Built and deployed 5+ AI/ML projects including medical image classification (96.69% accuracy) and a real-time face recognition attendance system. Skilled in end-to-end delivery — from raw data to production-ready applications.

## WORK EXPERIENCE

### Power BI Job Simulation — PwC Forage

Nov 2024

- Built interactive dashboards with drill-through reports and KPI monitoring using Power BI, DAX, and SQL.
- Optimized ETL pipelines and modeled business metrics using Power Query.

### Data Visualization Job Simulation — TATA Forage

Oct 2024

- Analyzed and cleaned 100K+ records using SQL and Power Query; built Power BI dashboards with DAX-based business insights.

## PROJECTS

### OJOS AI — Multi-Disease Eye Detection | Deep Learning · Medical AI

- Fine-tuned EfficientNetV2 CNN to classify 5 eye conditions (Cataract, Glaucoma, Diabetic Retinopathy, Myopia, Healthy) achieving 96.69% validation accuracy on clinical dataset.
- Applied CLAHE contrast enhancement in LAB color space for medical-grade preprocessing; deployed on HuggingFace Spaces via Docker with Flask backend and SQLite authentication.

### Face Attendance System | Computer Vision · Full-Stack Web App

- Built a fully browser-based AI attendance system using face-api.js (TensorFlow.js) and WebRTC; supports 5-angle face registration, automatic attendance marking, and CSV export.
- Zero backend required — IndexedDB for persistent storage; deployed as a single-page app on Netlify with adjustable confidence threshold and multi-camera support.

### TAG-mPRO — Media Reconciliation Engine | Data Engineering · Full-Stack

- Built a full-stack reconciliation tool to cross-verify Agency Invoices, Media Schedules, POs, and 3rd Party Reports across 5 document types with 8 workflow tabs and automated mismatch checks.
- Developed a Python PDF extraction engine deployed as a Vercel serverless function; backend supported by PostgreSQL/SQLite with role-based auditor login.

### SMS Spam Classifier | NLP · Machine Learning

- Trained a Multinomial Naive Bayes classifier with TF-IDF vectorization achieving 90%+ accuracy on a real-world SMS dataset; applied NLTK preprocessing — tokenization, stopwords removal, and lowercasing. Deployed on HuggingFace Spaces.

### Sales Analytics Dashboard | Business Intelligence · Power BI

- Designed an interactive Power BI dashboard to analyze sales performance across regions, product categories, and time periods using DAX measures, Power Query ETL, and drill-through reports.

### Movie Recommendation System | Recommendation Engine · Machine Learning

- Content-based filtering system using cosine similarity and TF-IDF vectorization on a Kaggle movie dataset (genre, cast, director); integrated TMDB API for live poster display. Deployed on HuggingFace with Streamlit.

## TECHNICAL SKILLS

**Languages:** Python, SQL, JavaScript, HTML/CSS

**ML / AI:** TensorFlow, Keras, EfficientNetV2, CNN, Transfer Learning, NLP (NLTK, TF-IDF), face-api.js, Scikit-learn

**Data & BI:** Power BI (DAX, Power Query), Pandas, NumPy, Excel (Pivot Tables, VLOOKUP, INDEX/MATCH)

**Databases:** PostgreSQL, SQLite, MySQL, IndexedDB

**Tools:** Flask, Streamlit, Git, Docker, HuggingFace, Netlify, Vercel, Tableau

## EDUCATION

### B.Tech in Data Science

2022 – 2026

Moradabad Institute of Technology (MIT), Moradabad

Relevant Coursework: Machine Learning, Data Analytics, SQL, Python, Power BI, Statistical Analysis

### Data Analytics Using Python + Machine Learning

June 2025

DUCAT IT Training School

## CERTIFICATIONS

- Data Visualization: Empowering Business with Effective Insights** — TATA Forage
- Power BI Job Simulation** — PwC Forage
- Data Analytics Using Python + Machine Learning** — DUCAT
